together

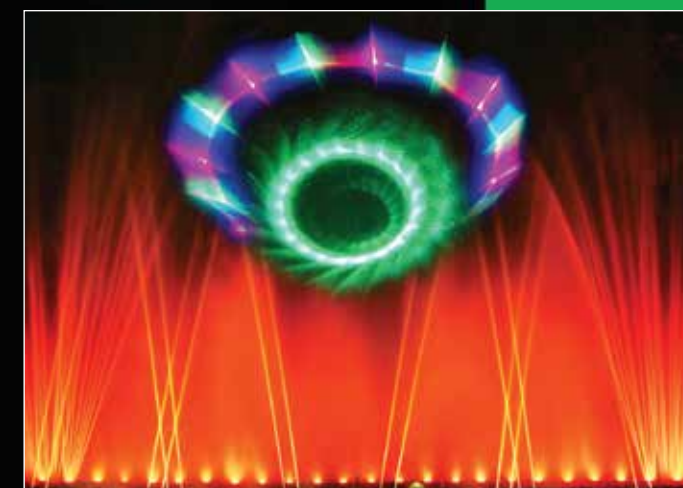

The Magical Tale of PREMIERWORLD®

For fifty years, the predecessor of Premier Fountains™ and now its successor PREMIERWORLD®, have been applying their expertise, producing magic and beauty.

Our manufacturing base at Kolkata has comprehensive facilities to produce our products and projects in-house, along with R&D and demonstration areas. Besides in-house creativity we harness the vast talents of India: CGI studios used by Hollywood and Bollywood; skilled artisans for images and scenery; renowned composers; famous actors, dancers, cinematographers and more.

We are dedicated in sprinkling a little magic and beauty on the world we share with you.

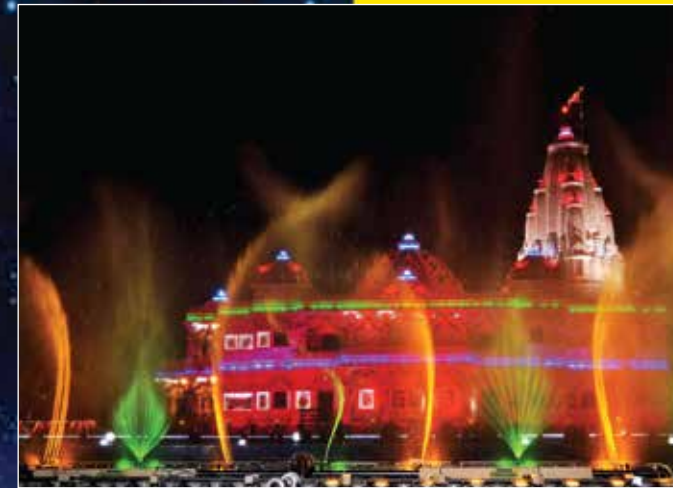

Magic in the Night Sky

Images suspended in the night sky created by lasers and video projection on a water screen that you cannot see and during the day there is no structure to obstruct or spoil the view. A multimedia show using water offers unique beauty and versatility. We create fantastic shows that can be pure spectacle or tell a story or provide dramatic entertainment. Whatever you want, we will make it happen.

Multimedia Shows

Fusion of Imagination and Innovation

Musical Fountains

Immensely popular as night time entertainment. And versatile too. Getting the audience jumping with the latest pops or complementing the creativity of the great composers as they play along with the classics. For calmer environments, they play music suitable for temples and contemplation. The water jets and effects are synchronized to the music and lit in vivid beautiful colours. Our Ultra Fast Action Jets are amongst the fastest as they sweep across the sky shooting patterns in the air. Simulated pyrotechnic effects get your attention with a bang, literally.

As pioneers of the technology, we design musical fountains of all shapes and sizes ranging from the compact indoor Fantasia to some of the world's largest spread over 100m long.

We have Programmed Controlled (PC) models and Frequency Controlled (FFC) models that perform automatically to the music. And an option for hybrid – PC and FFC. Then there are Floating Musical Fountains that bring the art to practically any water body.

Floating Fountains

We have elegant solutions for putting fountains on water. Floatation is provided by our boat design which blends in with the scene and houses all the working bits. A wide range caters for small models particularly for pond aeration up to complexes for large lakes.

Fountains

Water. Colour.
Music. Magic.

Fountains

A Way with Water

Dynamic Fountains

Here we make water move and change form. Ever evolving patterns and colours mean the fountain is not just decoration but also an entertainment.

InGround™

Any flat space can be a fountain and a playground. Jets come up in patterns or at random. Not just for spectators, people can get involved and interact with water.

Grand Sequencing Fountain

A fountain for key locations. A fountain with presence. Majestic and impressive. The display keeps changing and at night it is lit up with brilliant beautiful colours.

Tubular Motion Fountain

Inside and outside rings of jets slide up and down whilst maintaining an angular cut-off. Intriguing.

BurstingJet™ Fountain

The jet rises as a ball of water and falls back with a splash. The action is completely random so a group of jets is constantly changing. Does not use any controller or valves.

Slow Sequencing

Can be tailored to almost any space and budget. The jets rise and lower slowly contributing to a calm and peaceful ambience.

Architectural Fountains

It goes without saying that fountains augment an architectural design but they also cool their surroundings both physically and psychologically and provide a pleasant splashing to drown out traffic or machinery noise. There are fountains to promote a calm atmosphere but also to invigorate with vigorous movement and dynamic lighting at night. We have a very wide range and also undertake custom designs.

Special Water Features

Water is versatile. We get it to cooperate in working like a glass rod-LaminarJet™, fuming and smoking as in our Artificial Volcano and as sheet glass in our special waterfall. If you have an idea, we can probably get water to cooperate.

Fountains

Creating Signature Landmarks

Ride Simulation

Motion Makes the
World Go Round

Virtual Reality Experiences

The large excursions of our smooth riding motion bases along with DynamicVision™ 3D, surround sound, a variety of SFX, and a themed environment teamed with one of our library films or a special custom made film creates a thrilling and realistic experience. Projects we have installed include Hanuman's Flight to Lanka, Journey to Mars, Space Voyage, and Sikkim from the Air.

Capsule

With 10 to 30 seats in FRP moulded bodies, they are self contained moving theatres. Mounted on hydraulic motion bases that give highly realistic spacial motion. Being self-contained, they are adaptable to almost any location or space.

Motionchair™ Professional 5D

Not built to a price but for performance and durability. The professional's choice where reliability and continuous operation earns the greatest return. It looks the part with authentic racing seats and the motion base produces powerful g force movement. Partnered with DynamicVision™ 3D and incorporating a multitude of SFX both in-seat and in-theatre. Custom made films can be produced for any theme or visualization.

Platforms

Up to 36 seats for installation in VR, motion or ride simulation theatres and mounted on hydraulic motion bases. With on-board and in-theatre SFX, DynamicVision™ 3D and surround sound.

Mirror Maze Adventures

A Mirror Maze is a great illusion through multiple reflections and intricate design that baffles and misleads you. Watch yourself and your friends multiply into dozens. Wander into the alley of colours and effects. These are not just mazes, fun as they are, but full of surprises, interactive features, strong theming and SFX.

Dark Experiences

Journey Around the World, Jungle Trek, Treasure Hunt, Dungeon Challenge and more—excitement and fun await you in any of our dark experience walkthroughs. Can be tailored to available space and budget and will deliver crowd pleasing results.

Mirror Maze Adventures and Dark Experiences

Where Amazement Awaits at Every Turn

CreativeLighting™

And then there was Light

And what a light! Vivid vibrant colours or pure brilliant white, changing, blending, forming patterns. Using the latest LED technology and control we dress buildings, monuments, facades, structures, bridges in designs that enhance them, make them more prominent, make them landmarks, make them noticed. And the lighting is dynamic, it can change and produce moods from cool greens and blues to hot reds, yellows and oranges. For public buildings, the facility is there to be lit according to the occasion – national colours, colours for a festival, or the national colours of a visiting VIP.

Creative Lighting with colour blending effects at Samridhi Bhawan, State Bank of India, Local Head Office, Kolkata, India

3D Video Projection Mapping at Diu Fort, Diu, India

Sound & Light Show at Motijheel, Murshidabad, West Bengal, India

Sound & Light Show at Shaniwarwada, Pune, India

Bringing History to Life

History and mythology remain dormant and sometimes unappreciated. We bring historic sites, temples, castles, forts and more to life with shows that are not just sound and light but utilize the latest technologies: video projected on retractable screens, water screens, projection mapping on almost any surface; LED lighting producing brilliant colours; fire and smoke effects. Our creative directors use the full gamut of tools to produce shows that enthrall entrance, educate and entertain.
